

HFE

Single Phase Energy Optimizing Soft Starter

The HFE is the ideal 'retrofit' energy optimizing solution for Soft Starting single phase compressors and motors such as those used in Supermarket refrigerators and chillers etc., and can yield between 10 - 32% energy savings.

The HFE has a rugged tin lid construction and can be mounted easily next to the machine or control panel. Installation of the unit is quick and simple due to the 'two wires in, two wires out' design. The unit is 'fit and forget' and there is no maintenance for the user.

Main Features

Retrofit, quick fit, simple wiring
Quick and simple two wire in/out implementation means low cost install in existing equipment and rapid return on investment through energy and maintenance cost reduction.

LED Indication
Two LED's showing power and energy saving.

Energy Optimizing
Reduces required energy consumption when the motor is not under load -10 - 32% saving

in energy and related cost and carbon emissions.

Torque Reduction
Mechanical and electrical stress reduction or elimination means

compressors and motors last longer and require less maintenance.

'Fit and Forget'
No maintenance time or associated cost.

Model	Current (I)	Motor kW (230V)	Motor HP (230V)
HFE 1	10A	1.1kW	1.5HP
HFE 2	30A	4kW	5.5HP
		Motor kW (110V)	Motor HP (110V)
HFE 1	10A	0.56kW	0.75HP
HFE 2	30A	1.5kW	2HP

Technical Data

Operational Voltage (Ue)	110 – 230 VAC or (-15% to +10%) Single Phase
Frequency	50/60 Hz +/- 2Hz
Operational Current (Ie)	HFE 1 – 10A HFE 2 – 30A
Start Duty	Please refer to Basic Guides – FD1945 and FD2025
Ingress Protection	IP30 with standard cover
Start Time	Approx 0.5 to 5 Seconds continuously variable
Pedestal Voltage	Fixed at approx 15%
Ambient Temperature	0°C to 40°C without de rating
Design Standards	IEC 60947-4-2, EN 60947 – 4- 2 “AC Semiconductor Motor Controllers and Starters”

- Ideal Applications**
- Refrigeration Systems
 - Conveyors
 - Oven Fans
 - Chillers
 - Coolers
 - Air Conditioners
