Fast Response to Load Impact

Response to sudden load impact

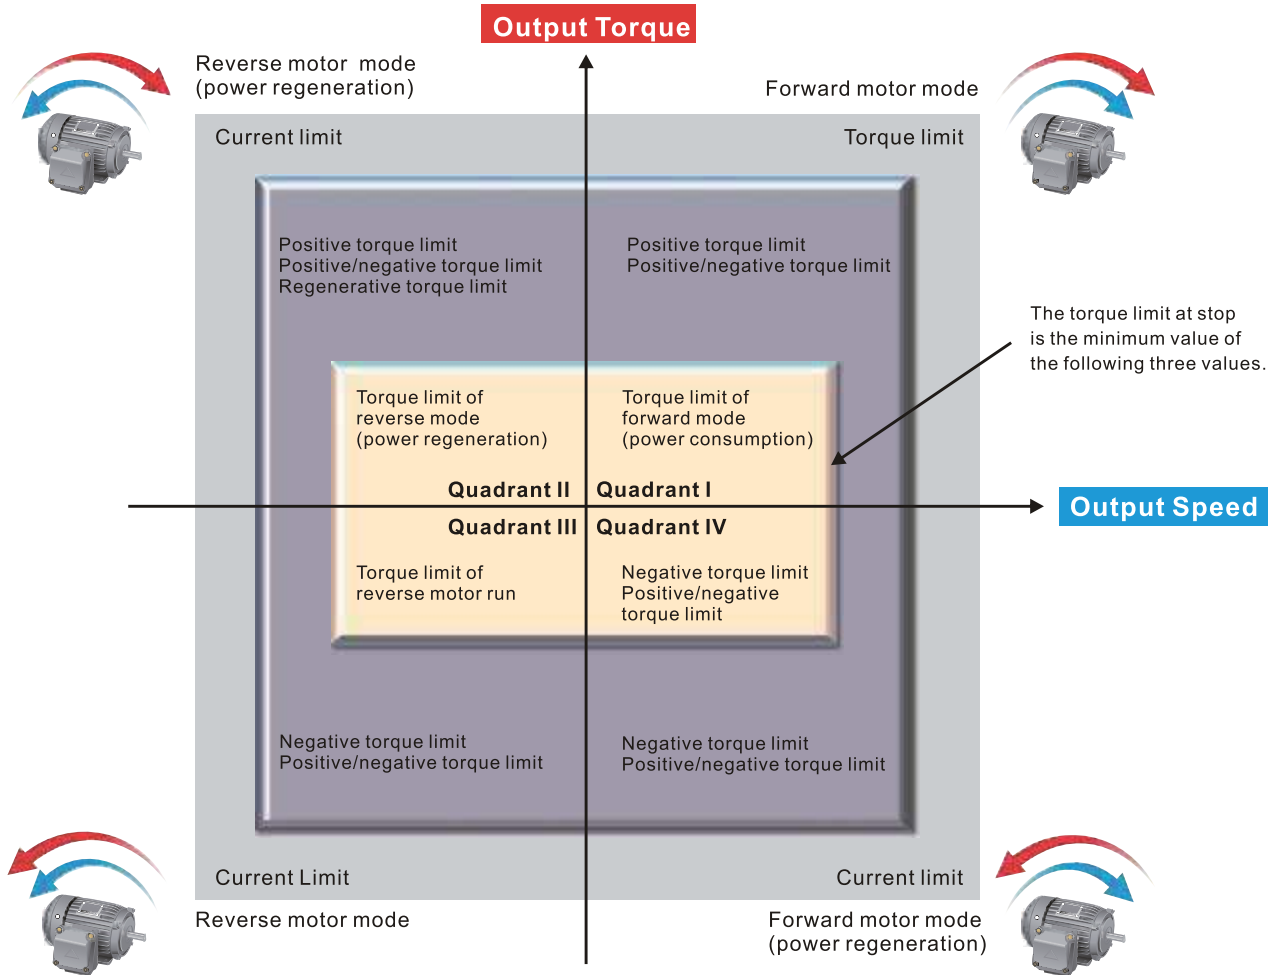

Large Starting Torque

In FOC+PG mode, the CH2000 is capable of creating a start-up torque up to 200% at extremely low speed for much more stable speed control.

Flexible Torque and Current Limit Settings

Protects the equipment from damage due to load impact. Under FOC control mode, setting the torque limit can protect the machinery in many aspects. The torque and current limit settings provide the user with a more flexible application.

Deceleration Energy Backup (dEB)

This function controls the motor's deceleration to a stop when sudden power failure occurs to prevent mechanical damage. It then returns the motor to its previous speed when power comes back on.

Industrial Applications

Speed Synchronizing

Load Sharing

Delta REG2000 Series Energy Regeneration Application

Using the REG2000 with the CH2000 in a crane and hoist application provides the user with a four-quadrant operation and energy saving results.

CNC Application (C-axis)

The CH2000 provides position control and pulse wave velocity following functions for C-axis applications with high overload capability providing excellent performance for high-speed rigid tapping.

Delta AFE2000 Series Active Front End Application

The Active Front End Unit (AFE2000) helps to reduce torque ripple and harmonics with higher power factor to provide excellent production quality with energy saving results.

Advanced crane function

▲ Mechanical brake control

Offers brake control setting for 8 independent criteria. Suitable for complicated applications and safety ensured.

▲ Advanced crane time sequence

Brake delay and dwell function ensure smooth operation.
